

Draft: July 12, 2016

Syllabus

Biodemography: Integrating Genetics and Social Science Research

Fall 2016: Sociology 901

Instructor: Jason Fletcher

jmfletcher@wisc.edu

Course Time: 9-11:30 am, Tuesdays

Place: TBD (Scheduled: Educ Sci 1053)

Office Hours: Tuesday 1:45-3:30 SS 4430 or By appointment

Course Overview:

Beginning with the sequencing of the human genome in 2003, the possibilities of a new integration between genetic and social science research have increased substantially. Recently, many social science research datasets have added important biospecimen collection activities, including the measurement of genetic sequence data. Examples include the Add Health, the Health and Retirement Study, Fragile Families as well as many international datasets.

The purpose of the course is twofold. First, we aim to gain an intermediate understanding of biological, evolutionary, and genetic theories and facts that then can be deployed to gain novel insights into traditional social science research questions. Second, ideally students would complete the course with the tools and ideas to begin a project that combines genetic and social science data, methods, and theories into a dissertation chapter or related research activity.

The course will begin with an overview, mostly from genetics and biology, of basic concepts. We will aim to utilize both foundational academic papers and also online video lectures and research presentations throughout the course in order to foster discussions of the material. The course will then transition into reading and discussing state-of-the-art journal articles in the integration of genetics and social science research. We will discuss data resources, methodological differences across disciplines, and ideas to extend the research in this area into new directions.

Requirements: Students will make at least two presentations during the course, outlining an assigned paper and outlining a potential research project and will complete a short paper (literature review or research proposal outline, 5-10 pages) on a topic related to genetics and social science.

Pre-requisites: there are no formal prerequisites, but students who have not had prior courses in data analysis and statistical methods may struggle.

Course Objectives:

Students will be able to understand and formulate research questions that combine some aspects of genetics (or biology) and social science research

Students will gain a basic/intermediate understanding of concepts from the natural sciences that are relevant for conducting interdisciplinary work merging the natural and social sciences

Students will understand theoretical and empirical issues in current research on genetics and social science

Grades

Your grades will include of three parts

1. Class participation (30%)
This is a seminar; you are required to attend each class prepared to discuss the assigned readings. Each student will closely read and give comments to book chapters under preparation.
2. Student Presentation (40%)
Each student will make a short presentation on a genetics/social science paper, discussing the research question, the data, the empirical approach, the limitations, and key findings.
Second, each student will make a presentation of his/her short paper topic.
3. Short Paper (30%)
Each student will prepare a 5-10 page paper that either (1) surveys a specific part of the literature or (2) outlines a potential research project that integrates the biological and social sciences, discussing data, empirical approach and main hypothesis.

Week by Week Overview

Week 1 (9/6)—Overview, Heritability, Adoption Studies and early Gene-Environment Interaction: Conley/Fletcher(CF) 1, 1 Appendix, and 2
Week 2 (9/13)—Genetic concepts/primer: CF 2 Appendices
Week 3 (9/20)—Genetic Discover, Conceptual History and On-going Statistical Issues: CF Chapter 3
Week 4 (9/27)—Genetics of Spousal and Friendship Tie Formation: CF Chapter 4
Week 5 (10/4)— Race, Ancestry and Genetics: CF Chapter 5 and Appendices
Week 6 (10/11)— Approaches to Gene-Environment Interactions: CF Chapter 7
Week 7 (10/18)—GxE II
Week 8 (10/25)—Topics in Genoeconomics I: Genes as Instrumental Variables
Week 9 (11/1)—Topics in Genoeconomics II: Macrogenoeconomics: CF Chapter 6
Week 10 (11/8)—Politics, Crime and Genetics
Week 11 (11/15)—Biomarkers / Telomeres
Class cancelled for Thanksgiving
Week 12 (11/29)—New Directions I: CRISPR: CF Chapter 8
Week 13 (12/6)—New Directions II: Epigenetics, CF Chapter 3 Appendix
Week 14 (12/13)—New Directions III: Microbiome and Student Presentations

Week 1 (9/6)

Course Overview and Examples, Discussion

- Heritability studies
- Adoption Studies
- Caspi/GxE
- Student Interests
- Data
